

Last year project summary:

- Enforce to take meds using Roku TV reminders that pop up
  - Manually push button to get rid of reminder to enforce that they read the reminder
- Programmed with Alexa (communicate together)

Possibilities:

- Initiate Zoom session with caregiver, then caregiver confirms they took meds/know about their appointment
- Don't confirm, set another reminder (keeps reminding to annoy user until they do what they need)

On phone/device or with website

When making meetings with sponsor, include Dr. Nadeem so that he can join meetings

Learned last year:

- Roku device is limited in what it allows to be put on the screen

Weekly Meeting:

- Thursdays from 12-12:30 (should only need a half-hour for updates and questions)
  - Online or in-person (decided meeting by meeting)

Nadeem will share materials/documents from last year to see if it's useable or if we need to start from scratch

Goal: deployable project NOT theory/breaks when running
